

As an over the Road truck driver and subscriber to XM Sattelite radio I firmly believe XM is selling a very valuable service to not only my industry but to the radio listening public overall. Their weather and traffic reporting Is not only EXTREMELY accurate but also EXTREMELY up to the minute and in many cases they have saved both me and my company vast amounts of time and money and delay time by providing this valuable service. Bottom line is that we subscribers PAY for this so we get this premieum commercial free environment that sattelite radio provides. I feel that this does not fall under a "National" Heading but a "Stellar" heading where NAB Nor any individual Country has any juristiction This is truely first ammendment free radio which we pay to have the privledge of. I am aasking the FCC in their capacity and in this over regulated age to REJECT The NAB's petition 04-160. Respectfully Submitted- Robert Mabie
